MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of January 1919.

THIRTEENTH YEAR: No. 1.

Temperatures were consistently above average, especially in the Sudan, but no exceptionally hot days occurred.

Pressure was below average everywhere except in the north of Egypt.

Most of the depressions moving over the Mediterranean basin passed too far to the north to affect Egypt at all strongly. A depression, however, came centrally over Egypt from the south-west, causing rain on the 17th as far up the Nile Valley as Wadi Halfa. The fall in Cairo was the heaviest recorded in one day since 1887, when accurate measurements commenced at Abbassia, 43 mm. of rain being recorded at Ezbekia. Much damage was done to buildings and railway communications in Cairo and to crops in various districts.

The mean humidity at Giza was normal, but was below average in the mornings, especially during the fourth week.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR JANUARY 1919, BY DISTRICTS.

VII. South Sudan†	755·8	−1·1	38·4	+1·4	23·2	+4·0	30·8	+2·7	7	+ 5

* For Port Sudan only. † For Mongalla only.

[P.T.O.

State of the River.—The Bahr el Jebel has been almost stationary throughout the month. The White Nile has been falling gradually and much more slowly than it did last month.

The Blue Nile has been falling normally. The Main Nile fell normally during the first half of the month and rather faster than usual during the second half.

The differences from the mean levels for January 1919 from last year and from the normal for thirteen years are :—

REMARKS :— Cancel all readings of Gallabat from March 1st to 15th, 1919 inclusive.

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of March 1919.

THIRTEENTH YEAR : No. 3.

In Lower Egypt temperatures were above the average practically throughout the month. The following were exceptionally hot periods : 10th to 14th, and 29th to 31st. On the 30th of the month the maximum temperature recorded at Gîza was 38°, or 13° above the average, this being the highest reading on record for the month of March.

Owing to the passage of a depression during the first week of the month, strong westerly winds were recorded in Lower Egypt. During the remaining part of the month, high-pressure distribution persisted over western Egypt and the Sahara, thus preventing depressions approaching us and forcing them to pass too far to the north to affect the country materially.

In the Sudan the winter type of pressure distribution persisted during the first half of the month.

The mean humidity at Gîza was 8 per cent below the average.

The rainfall was below average everywhere.

[P.T.O.

State of the River.—The river everywhere has been falling at a normal rate throughout the month, except that at Roseires a small flush was recorded on the 16th and 17th.

The differences of the mean levels for March 1919 from last year and from the normal for thirteen years are :—

STATIONS.	MEAN VALUES.	
	Difference from March 1918.	Difference from Normal.
	Metres.	Metres.
Mongalla	— 1·43	+ 0·15
Malakal	— 2·82	+ 0·06
Roseires	— 0·63	— 0·18
Khartoum	— 1·46	— 0·41
Wadi Halfa	— 1·39	— 0·19

The Daily Weather Report was not published after the 15th, owing to the cutting of telegraphic communications.

H. E. HURST,

Cairo, April 5, 1919. *Superintendent, Meteorological Office.*

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of May 1919.

THIRTEENTH YEAR : NO. 5.

In Egypt temperatures were persistently below the average throughout the month and ne mean for the month was abnormally low. The mean temperature of the day recorded t Giza was 20°·5, or 2°·3 below the normal, this being the lowest temperature on record ince 1902, when observations started at that station. Temperatures in the Northern Sudan were slightly above the average and slightly below in the Southern Sudan.

The weather during the month was mainly anti-cyclonic, with high pressures to the vest of Egypt. On the 7th, a depression came straight over Egypt from the north-west, ausing strong winds and dust, thunder and lightning being recorded in the afternoon. Violent winds with light showers followed at intervals. The low pressure distribution which persisted over Asia Minor during the second week deepened on the 15th, causing ain and cold weather.

In the Sudan the distribution of pressure was of the transition and winter types lternately.

The mean pressure was above the average in Egypt and the Southern Sudan, and ormal over the Northern and Central Sudan.

The mean humidity at Giza was four per cent below the average.

The rainfall over Egypt was normal. It was above the average everywhere else xcept over the Northern Sudan, where it was slightly below normal.

TABLE SHOWING THE DEPARTURES FROM [illegible] FOR MAY 1919, BY DISTRICTS.

VII. South Sudan†	758·1	+0·3	—	—	—	—	—	—	134	+ 2

† For Mongalla only.

* *Remark.*—Adis Ababa rainfall for April and May 1919 is 32 mm. and 43 mm. and their differences from normal are −65 mm and − 35 mm. respectivelly.

State of the River.—The Bahr el Jebel and the White Nile were rising a little faste than usual. Flushes were recorded on the Blue Nile at Roseires on the 16th, 18th, 20th 21st, 22nd, 26th, and 30th. These flushes began to reach Khartoum on the 23rd. Th Main Nile is still steady and a little below the average.

The differences of the mean levels for May 1919 from last year and from the norma for thirteen years are :—

SEP

Report on the Weather of July 1919.

THIRTEENTH YEAR : No. 7.

Temperatures over Egypt were on the whole above average. Hot weather persisted from the 9th to 18th, over Upper and Lower Egypt. The maximum temperature recorded at Giza was 41° on the 14th.

The mean humidity at Giza was 4 per cent below average.

Pressure was above average except over the Red Sea, where it was below. The summer type of pressure distribution with high pressure over the Sudan and low over the Red Sea persisted throughout the month.

Rainfall.—With the exception of the Red Sea coast, rainfall in the Sudan has been above the average everywhere.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR JULY 1919, BY DISTRICTS.

* Adis Ababa rainfall for June 1919 was 90 millimetres and the difference from normal — 55.

State of the River.—The Bahr el Jebel was below normal and almost steady during the first ten days, then fluctuated above the average until the 23rd and fell steadily. Afterwards, the White and Main Niles were above normal and rising at a normal rate. The Blue Nile was above normal and rising more rapidly than normal throughout the month.

The Atbara was normal during the first 20 days and above normal during the third ten days.

The differences of the mean levels for July 1919 from last year and from the normal for 13 years are :—

STATIONS.	MEAN VALUES.	
	Difference from July 1918.	Difference from Normal.

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPART[illegible]NT.

Report on the Weather of Septem[illegible] 1919.

THIRTEENTH YEAR : No. 9.

Temperatures were on the whole slightly above average, except in the Red Sea district and the South Sudan, where the temperature was normal. There were no very hot days and the weather throughout was settled.

In the Sudan, as usual in September, the summer distribution of pressure continued until the 15th, when the type of distribution marking transition from summer to winter made its appearance. The mean pressure was slightly above average. The mean humidity at Giza was seven per cent below average.

Rainfall in the Sudan was below average at all stations except Malakal and Dueim.

State of the River.—The Bahr el Jebel was above the average for the first five days, falling until the 22nd, then rising slightly, and is now (October 7) still 49 cms. below the average. The White Nile was rising and slightly above the average, for the first half of the month, and is now (October 6) normal. The Blue Nile at Roseires has been fluctuating much above the average till the 20th, and falling rapidly and below normal since the 21st; at Khartoum, however, it was steady during the first fortnight, falling faster than usual and below the average since the 26th. The Atbara was rising during the first ten days and falling rapidly during the rest of the month. It has only been above the average for the 9th to the 13th. The Main Nile was almost steady and below the average for the first thirteen days, rising until the 20th, then falling gradually on account of the considerable fall of both the Blue Nile and the River Atbara, and is still above the average.

The crest of the flood has now passed, and the flood this year has been slightly below the normal on the River Atbara, slightly above the normal on the Blue Nile, and normal on the Main Nile. The flood on the Sobat was still rising at the end of August, and was a little above normal.

The differences of the mean levels for September 1919 from last year and from the normal for thirteen years are :—

STATIONS.	MEAN VALUES.	
	Difference from Sept. 1918.	Difference from Normal.
	Metres.	Metres.
Mongalla	— 0·58	— 0·42

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of October 1919.

THIRTEENTH YEAR: No. 10.

The weather during the month was not disturbed by the passage of any depressions.

Temperatures were above average in all districts of Egypt and the Sudan, and a good deal of north-easterly wind, strong at times and carrying dust, was experienced. The last few days of the month were distinctly warm, the absolute maximum reached being 37° C. at Helwân on the 29th, or 9° above average.

In the Sudan the transition type of pressure distribution became established during the month. Pressure for the month was distinctly above average in Egypt and the North Sudan and below average elsewhere. The mean humidity at Giza was three per cent below average, and there was almost a complete absence of morning fogs in Cairo.

The rainfall has been deficient in the South Sudan, the North Sudan and the Red Sea district, and normal in Egypt and the Central Sudan.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR OCTOBER 1919, BY DISTRICTS.

DISTRICTS.	Barometer at 8 a.m. reduced to 0°C. S.L. & M.G.		TEMPERATURE.						RAINFALL.	
			MAXIMUM.		MINIMUM.		MAX.+MIN./2.

VI. Central Sudan	57·8	0·0	37·0	+0·1	20·8	+0·1	28·9	+0·1	35	0
VII. South Sudan †	57·8	−0·1	33·5	−0·1	—	—	—	—	54	− 49

* For Port Sudan only. † For Mongalla only.

[P.T.O.

State of the River.—The Bahr el Jebel has been almost steady throughout the month, below the average and much lower than last year. The White Nile has been normal. The Blue Nile, and the river Atbara have been below the average and almost identical with last year. The Main Nile at Halfa has been below the average since the 4th, and falling faster than usual. It is now slightly below last year.

The differences of the mean levels for October 1919 from last year and from the normal for thirteen years are :—

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of November 1919.

THIRTEENTH YEAR: No. 11.

During the first fortnight of the month temperatures over Egypt were considerably above average; during the third week slightly above; and during the fourth week slightly below. In the Sudan, it was slightly above average on the Red Sea Coast and slightly below elsewhere. In Egypt the absolute maximum reached was 38°, or 11° above average, on the 3rd.

A few depressions passed along the Mediterranean during the month but only one of these caused strong winds in Egypt, the wind rising to gale force on the north coast on the 24th.

At Alexandria a local disturbance caused heavy rain on the 19th, 46 mm. falling, this being the highest amount of rain recorded in one day in November since 1891.

In the Sudan the winter type of distribution prevailed during the month.

Pressure for the month was normal in the Central Sudan and slightly below elsewhere.

The mean humidity at Giza was 2 per cent below average. The rainfall has been much above the normal in the Southern Sudan, slightly above it on the Mediterranean Sea coast, considerably below on the sea and practically normal elsewhere.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR NOVEMBER 1919, BY DISTRICTS.

DISTRICTS.	Barometer at 8 a.m. reduced to 0°C. S.L. & M.G.		TEMPERATURE.						RAINFALL.	
			MAXIMUM.		MINIMUM.		MAX.+MIN./2.			
	1919.	Difference from Normal.	1919.	Difference from Normal.	1919.	Difference from Normal.	1919.	Difference from Normal.	1919.	Difference from Normal.
	mm.	mm.	°C	°C	°C	°C	°C	°C	mm.	mm.
I. Mediterranean	763·8	+1·0	25·6	+1·2	17·6	+1·5	21·6	+1·4	28	+ 5
II. Middle Egypt	764·1	+0·4	27·3	+2·4	14·1	+1·1	20·7	+1·8	1	− 2

VI. Central Sudan	758·7	+0·1	36·0	−0·2	17·7	−0·3	26·8	−0·2	0	− 3
VII. South Sudan †	757·2	−0·5	33·9	−0·5	—	—	—	—	(80)	+ 34

* For Port Sudan only. † For Mongalla only.

[P.T.O.

State of the River.—The river has been falling and below the average everywhere, except the White Nile. The Bahr el Jebel has been almost steady during the first ten days, rising on 11th to 14th and 19th to 21st and falling during the rest of the month. The White Nile has been steady until the 28th and began to fall on the 29th. The Blue Nile at Roseires has been falling at a normal rate throughout the month, while at Khartoum it has been falling until the 22nd, and steady afterwards. The River Atbara and Main Nile were falling normally throughout the month.

The differences of the mean levels for November 1919 from last year and from the normal for 13 years are :—

MINISTRY OF PUBLIC WORKS.—PHYSICAL DEPARTMENT.

Report on the Weather of December 1919.

THIRTEENTH YEAR : No. 12.

The mean temperature of the month was below normal in Egypt and slightly above it in the Sudan. The absolute maximum temperature was on the 22nd of the month, when it reached 27° at Gîza and Qasr el Gebali, 26° at Minya and 24° at Asyût. The 12th had the absolute minimum temperature of the month over Egypt generally, when the temperature fell to 3° at Gîza, 2° at Qasr el Gebali and 4° at Asyût. The weather during the month was of a settled character over Egypt with the exception of the North Coast, which was visited by normal depressions. A strong gale occurred on December 22–24th, near the coast, an instantaneous velocity of 105 kms. per hour and maximum hourly velocity of 70 kms. per hour being recorded at Alexandria on the night of 22nd–23rd.

The mean pressure was slightly below average everywhere except over Central Sudan, where it was very slightly above it.

The mean humidity at Gîza was 15 per cent below average.

The rainfall was unusually heavy over the northern part of the Delta and Red Sea coast and nearly average elsewhere. The rainfall for Alexandria was the heaviest recorded for the month since 1905.

TABLE SHOWING THE DEPARTURES FROM NORMAL FOR DECEMBER 1919, BY DISTRICTS.

DISTRICTS.	Barometer at 8 a.m. reduced to 0°C. S.L. & M.G.		TEMPERATURE.						RAINFALL.

VII. South Sudan †	757·2	−0·5	36·0	+0·5	—	—	—	—	11	+ 4

* For Port Sudan only. † For Mongalla only.

[P.T.O

State of the River.—The river has been everywhere below the average. The Bahr el Jebel has been almost steady throughout the month. The White Nile has been normal until the 8th, and falling rapidly afterwards. The Blue Nile has been falling at a normal rate. The Main Nile at Wadi Halfa has been steady during the second week and falling normally during the rest of the month and below both the average and last year.

The differences of the mean levels for December 1919 from last year and from the normal for thirteen years are :—
